

Skinner Box

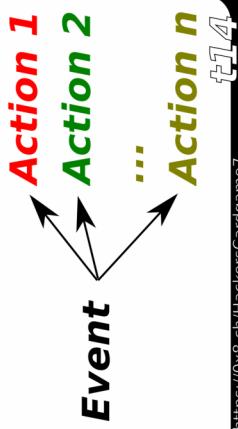

t2

Inventor: B. F. Skinner

Over electrodes on the floor he could give the mouse electroshocks = punishment / create aversion. By pressing the Button - the mouse was rewarded with a biscuit = reward / incentives / reward. A card Skinner searched for sequences of incentives and punishment, to completely remote-control test-object caused long-term damage, if you are being subject to such experiments talk about the details with equal aged people you trust. If you tell the Police they just diagnose you eg Schizophrenic and would put you in a mental institution where historically a lot of such illegal human experiments were made, eg. Burghölzli; I guess today (2019) the abuse refugees, #WerdingerKinder, #SchwabenKinder, not loved Childrend (often the oldest male), Soldiers, ... a society should act and leak what we know about.

Year: ~1960

Inventor: ????????

Specific Events can trigger Actions. GPS Data, Data from acceleration sensors in handles (for example specific roller coaster) Events could be Sounds, turning on Light Switch (maybe evaluated by smartmeter and the a list of what device uses how many watts), Images, Automatic Behavior Recognition, websites (urls), Buttons or Mouse gestures on a computer, Handy or even if you draw a circle with your hand in the air: One can recognize events with AI (Pattern Recognition, Deep Learning,...) For Example if Urs S. would have fired illegally with a weapon, this event would have been recorded and caused an event in a Gunfire locator system [1]. Concerning Urs B. (statement not verified yet) are the 1960s those who programmed the triggers against marc jr landolt, after they programmed those triggers they run in auto-pilot mode and they cant delete it (auto-pilot = allegation)

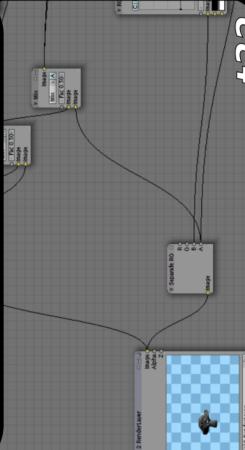

EventTrigger

Loop Recorder Part 3

t32

Inventor: xxxxx

Like t10 or t23 a game engine (here Blender 3D) is also some sort of t7 Card, but it's not just a loop it are more event-triggers (t14) or state machines (c01), for example if I leak about this sort of things a16 card is being activated against me. They often use an event in real live to create this story, you would focus on the initial scene and the person instead of technology. And possibly with AI / Deep Learning (a11 card) prerendered AI or genetic algorithm that learns. The card is in neutral gray, because you could use such technology also for good things but in my case they abused it more like weapon or "white" torture against me, that wants to kill. Book Erebus. The algorithm would maybe also try to isolate whistleblowers and whitehats that could be as simple like an inverted F=TVSr Card (Alex Wissner Gross) formula, not keeping all people connected but isolate some or even all.

Year: ????

In my opinion this terror attack against me uses the m123 card
- acid in my body lotion
- seal the closet
- infrared laser
- maybe in acer display, add polarization filter
- active denial system(s) that rots first layer of my skin
- maybe in combination with chemicals on my body or chemicals that was put into my body lotion, or even both (even 3 factors)
-> no solution yet

Physiker: 100 W netzteil reicht nicht 100W + Kondensator wurde defekt

obfuscation with chemnitrodes, that stitches that seems to be placed in the skin / face too

Infrared Ray Weapons maybe in every Display

Inventor: ?????

With a golden wire / metallic substance that was injected into my throat contract my muscles (possibly radio waves) that makes me paranoid. At the same time they loop sentences "you have Cancer", "It's because you smoke", "I'm just to keep you save", "It's just a game". That confuses / depresses me. BDSM toy materializes later, maybe shields the radio waves, or revictimize me or some sort of hint in case i would die. Coping Strategy would be if you think that it is just some sexual game, but in fact it is illegal torture to silence whistleblowers / Whitewash Hackers. Since i'm interested in the truth i am maybe on the right way to those old people that destroyed so many lifes. Unsure if this could be induced also by something like t1 or t6 card. I guess they use EEG (eg t1 Card). return channel to find out, if it succeeds destabilizing my psyche. they don't do peaks or spikes, otherwise it would be clear that it is electronically induced if they do a crescendo over several hours it really sucks. Additional there is a bloodien saliva mod, if you have permanently blood in you saliva visit a doctor!

t38

Inventor: ?????

If Jurisdictions use 3D Models for surveillance of accused people one should check the device and the supplier. If NSA/CIA uses Scapegoats for things they have done they would suggest local jurisdictions to do this sort of surveillance, but the device and infrastructure would be owned by the CIA/NSA to make the local jurisdiction believe that the Scapegoat is really the criminal. First Problem would be that the real criminal is still free and planning maybe already the next Crime and secondly the Scapegoat would then driven to commit suicide and the Jurisdiction could only say: "it's fair that the Criminal died" but they would know that m37 -> dt1 Card.

t25

Inventor: ?????

Since 1950s are things like Stimocceiver (t1 card), so there must be a device that transmits and receives the signal from the Stimocceiver, or 70 Years later it would be something like Neuralink (Elon Musk's Company). If the keys of an persons Neuralink would have been hacked or leaked, the person with the key and the strongest M-Com Station could force the person do things, he otherwise would not do (wrist case a11 card) if the implant has even the ability to dissociate that person so that the person does not remember anything (you could call that Hypnosis) it would be stupid to sentence only the "Bot". Even if the "Bot" confessed that he has done the crime, case is not yet over. The person who owns the strongest M-Com-Station would still be free and maybe planning the next, murder, rape, amok... But in the real world, it would maybe look more than t26 card, trx BFBC2 Honeypot

t18

Inventor: US Air Force

The Active Denial System roasts the top layer of the skin at a distance of 500m. For a range of 5 m logically more than 100 x smaller, small enough to fit in a cell phone. Actually, 1930s electron tube technology, but today you can do this also with semiconductors (Esaki-Tunnel diode). Maybe one could do the same thing directly in the CPU with Army-Grade Crypto, since the radiation power reduces to the square of the distance, it would be quite small. The "Active Denial System" - denier would thus be the natural nemesis of a TinFoil-hat. At a range of 500m one could terrorize lodger and if it would have been coupled with the victims computer and there are additional some algorithms one could drive the victim insane, drive to commit suicide or make it even run amok. See cars: t1, t10, t12, a16, at1, b1, e1, e5, m13, m19, m32, m46

Active Denial System
