

nightly erase of
relevant information(s)

([global] loop on Neuralink)

Intimidating Touring
Complete Victim

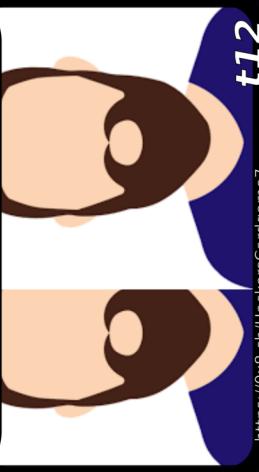

m1-16

Inventor: xxxxx

Year: ~????

IMHO there is a nightly (maybe global [generic personalized]) algorithm, that deletes relevant information(s) like sentences [1] from @loieroru from the mind of people or at least from my mind. Prerequisites would be lots of data about a persons live, something like Stumociever / Neuralink / US4877021 and specific algorithm that would eg. show an image / stimulus on Neuralink for the scene they would like to delete and causing pain at the same time eg. with b1 Card... If true one could record what they try to delete we would maybe then know how more how they manipulate the world. Yet another Nash Equilibrium... [1] Basically the NSA [March] AND CIA, and if want to be able to spy on you [March: bidirectional], and if know about they have 10 different options for spying on you that you 13. (March: at the same time)

Student Dignity
(Scapegoat)

t12

Inventor: ?????

Year: ~????

One could create a touring complete avatar of the victim or the scapegoat and every time if the jury or his social system would listen to him and believe him that he is just the scapegoat the touring complete avatar would start to intimidate the jury or the social system so that the group would stop listen to the victim and think of him as the accused or the offender. Technically it would be samples of earlier scenes when the victim was tortured and he said things he maybe just repeated (rawhammer attack of the mind).

Inventor: God / Satan

Year: ~1900

v. lat :: students "striving (after), interested (for, striving for", plural: booze-up, **Socrates** (468 - 399 BC) "Once You start believing you are, you've stopped becoming" / maybe low self esteem driven because of Parents abused their power against their kids => the student has often to work for free, if he invents something great, often older takes it and sell it, and not even give credit instead they intimidate him with non-students or student haters (induced) so he forgets about the thing he has invented, discovered or made public already. Other Use Cases; Cleaning (woman, firefighter, work with dirty chemicals for cleaning up after a fire, older generation abuse the low self esteem they caused themselves students good & brave students

m5

Inventor: subconscious ad

Year: ~????

This scene is possibly a simile for a shrink making one of his patients (or LabRats as the shrink thinks of *cAPI* his patients) psychotic and making him / her attack the Whitehat / Whistleblower. The "LabRat" would then attack the Whistleblower / Whitehat as soon as he is connected to the victims Virtual World (m98, m99)

INK BLOT TEST
FIXATION

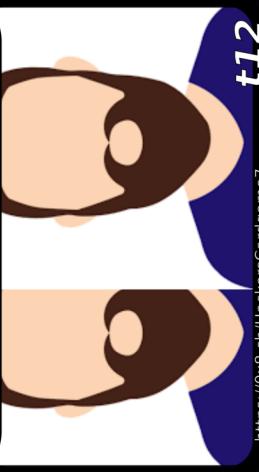

m1

Inventor: Hermann Rorschach

Year: ~1900

Sold as a "phantasy test" with formless blobs for children, normal adults and for mentally ill", in fact it distracts the questioned (fixation) so he not focuses to much on the questions. A Hack would be to add an eg. RFID or LC circuit on the backside of the paper and to activate small Active Denial Systems or Hum Noises or treble Sounds around 15000Hz below the conscious perception threshold to let the questioned act as a liar since his face would show stress because of the active denial system that was activated. Using an inkblot test as "lie detector" would therefore fail in some cases.

Algorithms for Automated
Psychological Warfare

m1-16

Inventor: xxxxx

Year: ~????

See: Main Bot der Kombattant, PART2 https://media.ccc.de/v/31c3-6184-de...de_saa_9-201412271715-... mein_biot_derkombattant...josc - arch4000. There are algorithms, that create psychological warfare "Stories" based on Bigdata and are transmitted over eg. Neuralink or US4877021. For example if I Google "Ian Murdoch suicide", pedophilia". With Data about your first love and the society you lived in, they can render image and voice content. For true people that both promised eternal faithfulness they would show scenes where one of both becomes untrue. Sort of Jaro Winkler Algorithm matches nearest scene in Bigdata, making you think it is real. Even if both Systems or Anygdata implants makes me aggressive or drive me to commit suicide attempt. "Successful therapy" would mean that I break the promise I gave her, but this would maybe kill her. Combined with or without **Medulla Spinals Implant hack**. This algorithms seems to creates as much hate in the country/society occupied as imaginable => corrige!

Communication
Scheme between patients
in Mental Institutions

m1-44

Inventor: Satanic

Year: ~????

The communication between patient and patient or between patient and medic or the communication between **psychiatric nurses** and **patients** and **and** **patients** are often ambiguous. In my opinion they (who) try that communication between patients will be poisoned (m50). I try to be unambiguously. But as soon as I use too complicated words, they call me imaginary poser (maybe some stimulus reaction habit). Such cards would maybe help, but I guess they rendered "rage" on my cards... Hopefully at least the medic to medic Link works!

Inventor: xxccc

Year: ~????

This scene is possibly a simile for a shrink making one of his patients (or LabRats as the shrink thinks of *cAPI* his patients) psychotic and making him / her attack the Whitehat / Whistleblower. The "LabRat" would then attack the Whistleblower / Whitehat as soon as he is connected to the victims Virtual World (m98, m99)

fear detection

m57

Inventor: xxxxx

Year: ~????

with Neurosky MindWave you can read attenuation or meditation, so we guess one electrode (t1 card) would be sufficient to extrapolate for example also the parameter fear. And if they would show something like Card on eg. Facebook stream and would find out that the victim gets paranoid or fears that, they would loop such scenes until the victim tries to commit suicide or runs amok. So this card would be an important element for eg. c6, c6b or a16 card, since the offender does not only want to own or kill the victim, the group would feel good when the **victim is revictimized**, so the real d1 card against the group, normally for later use the offender he says something like "it's just training", "we only want to hel" and a lot similar lies, so question if one of the offender says "it's just training", combined with m34. Workaround: Listen to music you love, I use wireless headphones to not disturb my neighbors, I guess the music makes it harder for detection algorithms to identify emotions.
