Year: ~????

Inventor: XXXXX

Computers are highly complex, nobody understands really what a CPU does in detail. Also Operating systems are complex, if you would take an average Operating System you would have at least 5GB, 16GB would be 500'000 A4 Pages that would weigh 250kg, so if you multiply that with 5 one would easily find out that nobody could handle that. Therefore the companies invented "The IT Guy". In the early days they got a lot of money, today no company. So if something goes wrong or even someone dies because the Scapegoat and even sentenced. If you add the complete content that is handled with a computer it are more Exabytes than Gigabytes. So definitely nobody can handle that. But of course the 20 years old IT-Guy will be held responsible, even if he is the one with the smallest salary i had in 1999 at ABB Flexible Automation ZH Alstetten. And if you would tell what happens at such soft of companies they analyze the problem to keep the malware secret. Maybe even fast interacting. But that eg interact with sexual integrity of equal aged women since CIA would "not attack women."

If you know Star Trek then you know what this archetype thinks like. Focussing only on profit, ignoring the pain of the people they take the money from. Even risking lives for profit.

Since the Roswell-incident, the CIA possibly tried to keep illegal Human Experiments secret and told the people and victims that such incidents were Aliens "attacks". Those who found out tried to find a way to protect themselves are thrown out of the society. Because tin foil would possibly block things like the Stomceiver implants, they started to discredit this archetype in Media as a Crazy Person. Not sure if tin foil helped at all, possibly depends on frequencies and transmitting power. We should pay some tensor-magicians or better enslave them to calculate this for us for free.

Image: An Example of this archetype, discrete tin foil in Star Trek in Star Trek Voyager S03E08.
